

Life Science Seminar

第38回 生命科学交流ミーティング

日時：7月24日(月) 14:00 ~15:00

場所：プロジェクト棟 1F 大講義室

Jamie M. Kass 先生

今年着任されたキャス先生の
ご講演です！

ドーナツもあります！！
ぜひお越しください！！！！

**What is biodiversity,
why is it important, and how do we predict it?**

Summary :

Many of us have heard of biodiversity yet lack a good understanding of it. For example, how do we define it? Why is it important for human society? How can we make predictions of it for different times and places? In this talk, I will discuss these topics and provide a brief introduction to the field of macroecology, which seeks to understand large-scale patterns of biodiversity across the globe. I will also highlight research I have done in this field and talk about my plans for future work here at Tohoku University.

Organizers : Hongyang Wu, Momo Otake, Yuki Soga
